Prepare yourself before joining a VFX Training Course

Films and TV productions today involve a lot of Computer Generated (CG) effects and elements to tell their stories more effectively. VFX or Visual Effects is an art and tool used to create these magic on screen. It is an amalgamation of technology and high level artistic skills.

A VFX production involves lot of departments at various levels to bring a scene that is impossible in real life. There are multiple levels of opportunities to work in a VFX production starting from on-set supervision, to 3D artist or a compositor who combines all the elements seamlessly to make a stunning image. Students looking for a career option may find a lot of opportunities in this creative field. Proper **VFX training** and certification will help them to kick start their careers. There are some top VFX training institutes in Hyderabad where students can train and specialize in various modules of this process.

But before you join any training, you may need to prep yourself up for the process ahead. Here are a few pointers that will help you gear up for the ride

Knowledge is light!

Try to gain knowledge about this art cum technology. Search around for the companies, production houses involving VFX, what pipelines or techniques they use for a particular project. YouTube 'behind the scenes' videos and breakdown videos will be your best source for these.

Famous Personalities

Learn about some important personalities in the industry and what projects/films they have worked on. Their interviews will provide good insights into their accomplishments.

Framing an art

Understanding photography helps you understand lighting, framing etc. in an image. This is an important aspect of VFX. Basics of camera and filmmaking knowledge will be an added advantage.

Friendship with computer

VFX involves a lot of computer based work, if you are new to computers, it is recommended to be little computer friendly, this helps you on the long run.

Software Mania

A lot of software are used to create these visual effects, try and explore some simpler software like Adobe Photoshop, Adobe Illustrator, Adobe After Effects. The training institutes will anyhow go more in depth in these and other advanced software (like Autodesk Maya, Foundry Nuke etc.) and techniques, some prior knowledge will give you a comfortable start.

Practise, practise, practise!

VFX is an art like any other, so practice is the key, make up your mind for dedication and commitment towards practice. The better the artist you are, more opportunities will follow you.
